

Njord SAA

The Njord SAA (Submersible Amphibius Aircraft) is a remote controlled aircraft that can transition from underwater travel to aerial flight, utilizing deployable wings which fold out from the body.

Carbon fiber shell

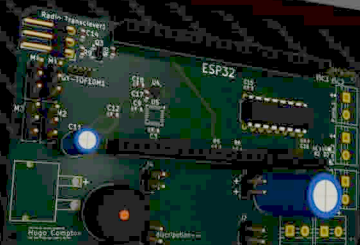

816 mm

Tailorons

**1.5 Kg Thrust
per motor**

**Fiber glass
shell nose cone**

Deployable folding wings

The PCB for the Njord SAA is a standard 4 layer PCB featuring all elements needed for a flight computer like an IMU, barometer, ESP32, and many pin headers for devices like servos, motors, and other sensors.
